

Dear Valued Customer,

To assist you with the maintenance of your Air circulation system, please follow the instructions below when your HEG-DC01 Digital Controller Filter message appears.

Every 12 months, a "Filter Reminder" message will appear on the digital controller which is a reminder to have the air inlet cleaned. However, in most houses it does not require cleaning for 24 months or more.

These instructions will enable you to reset the Filter Reminder on the HEG-DC01 controller for another 12 months.

Steps to reset Filter message:

1. Hold down the two left side buttons (Air Boost and Power buttons) simultaneously on the controller for 8 seconds until a message "**Feature Set-Up**" appears. Sometimes it may take several attempts to ensure that both buttons are held down at the same time.
2. Scroll through options using the Up or Down buttons (Air Boost or Power buttons, respectively) until you come to the **Reset Filter** screen.
3. Press **SET**, and then press **SET** again to confirm.
4. Press **Mode** twice to exit back to the main screen.
